

Risk Incidents

App Suite

2021

Value Proposition

Capture & respond to risk incidents in a timely manner with minimal training.

Risk Incidents App provides a simple and intuitive approach to collecting risk incident data and encapsulating lessons learnt directly into your business operations; reducing reporting friction for incidents and enhance your operational resilience and efficiencies.

Problem Statement

Most businesses try to collect too much information at the time of initial reporting of an incident, introducing friction into their incident reporting process.

A typical incident form is too granular and relies on business teams to remember their incident training – what is a near miss?

These practices lead to:

- ✘ **Reporting friction:** complex reporting forms that require training to complete accurately.
- ✘ **Lessons lost:** there is no easy way to connect incidents to business activities.
- ✘ **Reactive posturing:** business and assurance teams are constantly reacting to the same things going wrong.
